# Powered Bolster Extensions

**20  
tons**

The Powered Bolster Extensions (PBE) is the type of bolster extensions used to transfer the die driven by motor power. The die is connected to the roller chains by die hook. Specially designed roller chains offer great strength to move on the rail.

Overcoming the difficulty of moving heavy die, PBEs is able to push and pull it easily by simple steps, which operator merely use remote control to transfer the die forward and backward. Also, in contrast to traditional way transferred by manpower, PBEs promote efficiency in the process of die changing.

**So "EASY" to transfer heavy die !**
